useCreateReport

Overview

The `useCreateReport` hook allows users to report inappropriate or problematic content. It provides specialized functions to submit reports for comments or entities, with options to specify reasons and additional details.

Usage Example

```
import { useCreateReport } from "@replyke/react-js";

function ReportButton({ targetId, targetType }: { targetId: string; targetType: "Comment"
  const { createCommentReport, createEntityReport } = useCreateReport();

  const handleReport = async () => {
    try {
      if (targetType === "Comment") {
        await createCommentReport({
          targetId,
          reason: "spam",
          details: "This comment contains spam links."
        });
      } else {
        await createEntityReport({
          targetId,
          reason: "harassment",
          details: "This entity contains inappropriate content."
        });
      }

      console.log("Report created successfully.");
    } catch (error) {
      console.error("Failed to create report:", error.message);
    }
  };

  return <button onClick={handleReport}>Report</button>;
}
```

Parameters & Returns

Parameters

The hook provides two functions with the following parameters:

`createCommentReport`

Parameter	Type	Required	Description
`targetId`	`string`	Yes	The ID of the comment to report.
`reason`	`ReportReasonKey`	Yes	The reason for reporting the comment.
`details`	`string`	No	Additional details about the report.

`createEntityReport`

Parameter	Type	Required	Description
`targetId`	`string`	Yes	The ID of the entity to report.
`reason`	`ReportReasonKey`	Yes	The reason for reporting the entity.
`details`	`string`	No	Additional details about the report.

Returns

The hook provides the following functions:

Function	Description
`submitCommentReport`	Submits a report for a comment.
`submitEntityReport`	Submits a report for an entity.
