

useDownvoteEntity

Overview

The `useDownvoteEntity` hook provides a way to downvote an entity.

Usage Example

```
import { useDownvoteEntity } from "@replyke/react-js";
import { Button } from "@components/ui/button";

function EntityComponent({ entityId }: { entityId: string }) {
  const downvoteEntity = useDownvoteEntity();

  const handleDownvote = async () => {
    try {
      const response = await downvoteEntity({ entityId });
      console.log("Entity downvoted:", response);
    } catch (err) {
      console.error("Failed to downvote:", err);
    }
  };

  return <Button onClick={handleDownvote}>Downvote</Button>;
}
```

Parameters & Returns

Parameters

The `downvoteEntity` function returned by the hook accepts a single object with the following field:

Parameter	Type	Description
<code>entityId</code>	<code>string</code>	The ID of the entity to be downvoted.

Returns

The function returns a `Promise<Entity>` representing the API response:

Return Value	Type	Description
<code>response</code>	<code>Entity</code>	The updated entity after it is successfully downvoted.
