

useDeleteList

Overview

The `useDeleteList` hook is used to delete a specified list within the current project. Note that root lists (lists without a parent) cannot be deleted using this hook.

Usage Example

```
import { useDeleteList } from "@replyke/react-js";

function DeleteListButton({ listId }: { listId: string }) {
  const deleteList = useDeleteList();

  const handleDeleteList = async () => {
    try {
      await deleteList({ listId });
      console.log("List deleted successfully");
    } catch (error) {
      console.error("Failed to delete list:", error.message);
    }
  };

  return <button onClick={handleDeleteList}>Delete List</button>;
}
```

Parameters & Returns

Parameters

The hook returns a function that accepts an object with the following field:

Parameter	Type	Required	Description
<code>listId</code>	<code>string</code>	Yes	The ID of the list to be deleted. Root lists cannot be deleted.

Returns

The function does not return a value but ensures the specified list is deleted on the server upon successful execution.
