useFetchUserByForeignId

Overview

The `useFetchUserByForeignId` hook is used to retrieve detailed information about a specific user within the current project by their foreign ID (only relevant when integrating Replyke with an external user system). This can be useful for displaying user profiles or fetching data for interactions.

Usage Example

```javascript
import { useFetchUserByForeignId } from "@replyke/react-js";

function UserProfile({ foreignId }: { foreignId: string }) {
  const fetchUserByForeignId = useFetchUserByForeignId();

  const handleFetchUser = async () => {
    try {
      const user = await fetchUserByForeignId({ foreignId });
      console.log("Fetched user details:", user);
    } catch (error) {
      console.error("Failed to fetch user details:", error.message);
    }
  };

  return <button onClick={handleFetchUser}>Fetch User</button>;
}
```

Parameters & Returns

Parameters

The hook returns a function that accepts an object with the following field:

Parameter	Type	Required	Description
`foreignId`	`string`	Yes	The ID of the user to fetch.

Returns

The function resolves with a user object containing lean user details:

Return Value	Type	Description
`UserLean`	`UserLean`	The details of the fetched user object.
