Sign Out

Endpoint

URL: `/:projectId/auth/sign-out`

Method: `POST`

Authentication Required: No

Description

Signs the user out by deleting the refresh token from the database and clearing the HttpOnly cookie. Accepts the refresh token from either the request body or cookie.

Request

Headers

Header	Type	Required	Description
`Cookie`	`string`	No	Can include `replyke-refresh-jwt` cookie

Body Parameters

Field	Type	Required	Description
`refreshToken`	`string`	No	JWT refresh token (optional if cookie is present)

Example Request

```
{
  "refreshToken": "<REFRESH_TOKEN>"
}
```

Response

Success Response (204 No Content)

```
(No response body)
```

Error Responses

Server Error (500 Internal Server Error)

```
{
  "error": "Internal server error.",
  "code": "auth/server-error",
  "details": "<Error message>"
}
```

Notes

- If the refresh token is valid, the corresponding token record is deleted.
- If the refresh token is invalid, expired, or missing, 204 is still returned.
- The cookie `replyke-refresh-jwt` is cleared if present.
- No information is leaked about whether the token existed or was valid.
