useFetchMentionSuggestions

Overview

The `useFetchMentionSuggestions` hook is used to retrieve a list of suggested users based on a search query. This is commonly used in features like @mentions or user search.

Usage Example

```
import { useFetchMentionSuggestions } from "@replyke/react-js";

function UserSuggestions({ query }: { query: string }) {
  const fetchMentionSuggestions = useFetchMentionSuggestions();

  const handleFetchSuggestions = async () => {
    try {
      const suggestions = await fetchMentionSuggestions({query});
      console.log("User suggestions:", suggestions);
    } catch (error) {
      console.error("Failed to fetch user suggestions:", error.message);
    }
  };

  return <button onClick={handleFetchSuggestions}>Get User Suggestions</button>;
}
```

Parameters & Returns

Parameters

The hook returns a function that accepts the following parameter:

Parameter	Type	Required	Description
`query`	`string`	Yes	The search query for user suggestions.

Returns

The function resolves with an array of user objects:

Return Value	Type	Description
`UserLean[]`	`UserLean[]`	A list of user objects matching the query.
